N

4

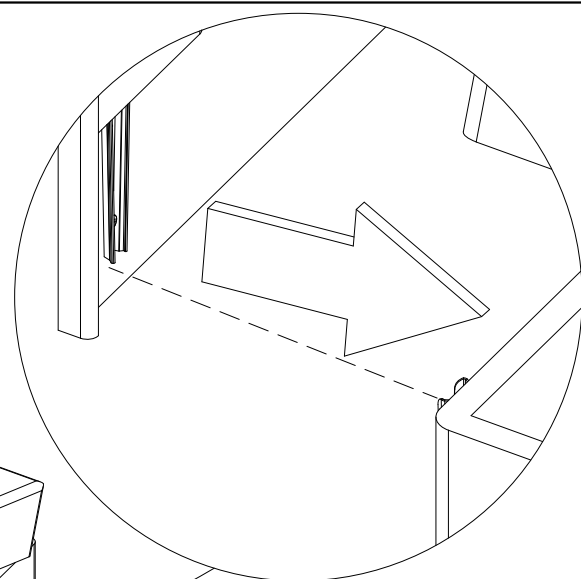

A diagram showing a cylinder of radius r in contact with a corner formed by two perpendicular surfaces. A normal force N acts from the corner towards the center of the cylinder. A friction force f acts tangentially to the cylinder's surface at the point of contact with the vertical surface. A curved arrow indicates the cylinder is rotating clockwise.

2

Diagram 2 illustrates the second step of assembly: attaching the headboard. The headboard, labeled **1**, is shown being moved towards the bed frame, which is labeled **2**. An arrow indicates the direction of movement. The headboard is designed to fit over the top rail of the frame. A callout shows the headboard's internal structure, including a vertical support and a horizontal rail, which will connect to the frame's top rail.

3

This diagram shows the headboard being attached to the bed frame. A circular callout highlights the connection point on the left side of the headboard, where a pin or screw is used to secure it to the frame's slat.
